CHANGE YOUR HABITS, CHANGE THE PLANET

Making small changes to your everyday routines & staying conscious of your footprint are great ways to make an impact!

Connect to Wi-Fi

Using mobile network takes at least 2x more energy than Wi-Fi! Connect your device before streaming music or video

Optimize Videos

Reduce your video resolution to save energy if it's just for background noise or you aren't going to be watching closely

Use Bookmarks

Google searches have a carbon cost. Bookmark your most-used sites or create a shortcut instead of searching every time

Toggle your signals

Turning off Bluetooth, Wi-Fi, or GPS when you're not using it can save a ton of battery, especially on campus

Just unsubscribe

Unsubscribe, limit, and delete emails you aren't going to read: Sending/storing emails involves more energy than you think!

Recycle Electronics

There's a ton of rare and expensive materials in your devices! Care for your stuff & recycle properly when they break or get replaced

Unplug when done

Get a power strip or unplug sleeping electronics. Saves energy & keeps your batteries healthier!

Check your settings

Check settings for ways to keep your device healthy & save energy while you're doing it

Nudge Industry to Change:
Most emissions are caused by corporations, not consumers!

Reach out to companies you use to ask them to take environmental action in their products & practices.
